

STAGIDIP USER MANUAL (EASY VERSION FOR OPERATION TEAM)

This manual is made for users who are not technical.

1. What is this system?

StagiDIP is an internal web system to manage:

- registration/master data
 - staging process
 - warehouse transfer
 - delivery status
 - summary reports
 - integration monitoring
-

2. How to login

1. Open website URL from IT/admin.
2. Input email and password.
3. Click **Sign in**.
4. If login success, Dashboard page opens.

If login fails:

- Check email/password again.
 - Contact admin if still cannot login.
-

3. Main menus and function (simple)

Dashboard

See high-level operational data and tabs.

Registration

Create and maintain master data (type, model, warehouse, customer, user, etc).

Specification

Manage machine/specification data.

Staging Registration (Purchase Order)

Manage purchase-order operational records for staging process.

Pre Staging

Checklist before staging starts.

Staging

Monitor new machine, old machine, and pre-loading inspection pages.

Status Delivery

Track machine delivery progress and notes.

Warehouse

Manage warehouse transfer and delivery request related data.

Summary

See reporting pages for machine, warehouse, status delivery, duration, and other summaries.

My Datindo Integration

Monitor integration data (ws, serial, ticket, installation date).

4. Standard way to use table pages

For most pages, use this flow:

1. **Search** data by keyword.
2. **Add** new data (if Add button exists).
3. **Edit** existing row (if Edit button exists).
4. **Delete** row (if Delete button exists).
5. Confirm success message appears.

6. Re-check table to ensure data changed.

If button does not exist, that page is read-only.

5. Daily operation checklist

At start of day:

1. Login success.
2. Dashboard opens.
3. Open 1-2 critical pages (Status Delivery, Warehouse Transfer).

During operation:

1. Input/update data in related module.
2. Validate row appears in table.
3. Use search/filter to verify data.

End of day:

1. Open Summary pages for final checks.
 2. Export data if required by team.
 3. Logout.
-

6. If error happens

When finding issue:

1. Take screenshot.
2. Write page name/menu.
3. Write steps before error.
4. Send report to dev/IT with:
 - expected result
 - actual result

Use QA checklist document for full test steps:

- docs/QA_FULL_TEST_SCRIPT.md
-

7. Important note

- Some old URLs are aliases and will auto-redirect to new URL.
- If you get "Unauthorized" or redirected to login, please login again.
- If page is blank/failed to load repeatedly, report to IT/developer.
